Key Features :

- Language Translator
- Filtering by Categories
  - Prize
  - Ratings
  - Name
- Search Bar
- Login with Google
- Payment Gateway (Razorpay)
- Plant Doctor
- Blog
- Dashboard
- SMTP Server (for Mails)

Technologies used:

Frontend:
      Html,CSS,Bootstrap4 ,javascript
Backend :
      Django, Mongo DB

Our Motivation

Farmers aren't getting the proper value for their crops. This is because most farmers aren't able to sell their crop to the consumers directly so they contact mediators ,who for their own profit buy this crop for less than the market price and sell this to higher prices.

Through this project we will try to help out at least some of them from this issue. We will provide a portal for the farmers where they can sell there crops directly to the customers so that they get profited.
